

# CyberPulse at a glance

CyberPulse trains employees with a story instead of an annual course. Every week the team reads a new chapter of an ongoing story in which the attacker CIPHER targets the fictional company Novento Groep, and takes two short quizzes: one to recognise the attack and one to stop it. Together that takes about ten minutes a week. Admins get reporting and evidence for NIS2 (the Dutch Cybersecurity Act) and ISO 27001, and the Pulse browser extension stops ClickFix attacks. CyberPulse is built by ethical hackers and is a brand of Cybertraining.it EU B.V. in Alkmaar, the Netherlands.

|                         |                                                                                                                                                           |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPANY                 | CyberPulse is a brand of Cybertraining.it EU B.V., Alkmaar, the Netherlands                                                                               |
| FOUNDER                 | Ray de Graaf, founder and red team lead (OSCP, OSEP, GPEN, CRT0, CEH, DFIR)                                                                               |
| PRODUCT                 | One ongoing story over 52 weeks, in four seasons of thirteen weeks. A new chapter and two short quizzes every week, about ten minutes in all.             |
| SCALE                   | The story runs to almost 85,000 words; the question bank holds over 750 quiz questions.                                                                   |
| PHISHING<br>SIMULATIONS | From season 2 (week 14), linked to progress and reporting.                                                                                                |
| PULSE                   | Browser extension against ClickFix, clipboard fraud and fake login pages, for Chrome, Edge and Firefox. Since October 2026, included in the subscription. |
| BREACH MONITORING       | Business addresses and shared mailboxes, via Have I Been Pwned.                                                                                           |
| HOSTING                 | Servers in the Netherlands, encrypted backups in Germany.                                                                                                 |
| LANGUAGES               | Platform and knowledge base in Dutch and English.                                                                                                         |
| PRICING                 | Public: €4.75 to €1.95 per employee per month, in bands, excl. VAT, minimum 10 employees. 14-day free trial.                                              |
| WHO IT IS FOR           | SMEs, the public sector and MSPs, with a white-label partner programme.                                                                                   |
| FOUNDING MEMBERS        | Ahasend, WoIP and Xafax ICT                                                                                                                               |

## FIGURES ON THE THREAT

**23%**

of Dutch businesses with two or more employees dealt with phishing or spoofing in 2024. For 50 to 250 employees it was 44%.

Statistics Netherlands (CBS), 2025

**62%**

of breaches involved the human element, such as a click on a phishing email or a mistake.

Verizon, DBIR 2026

**1.1M**

devices on which Microsoft saw a ClickFix command run between February and early May 2026: roughly an eightfold increase.

Microsoft, Digital Defense Report 2026

**8,000+**

organisations have fallen under the Dutch Cybersecurity Act since 15 August 2026. Their board members must take suitable training themselves.

Dutch government, July 2026
